

# Advanced Resuscitation and Life Support

Wavelength is proud to partner with the Australian Institute for Clinical Education (AICE) and Professor Paul Middleton, to bring you a course that redefines advanced life support training and provides an exceptional learning experience.

## What sets the ARLS course apart ?

### 01

#### More time to do what matters

The structure and design of the course means that ARLS can deliver educational outcomes in a single day that are equivalent to those delivered in two days by other courses.

### 03

#### The latest research

Like student exchange, you can join a student loan to get experience abroad. Always check the official campus website for exact information.

#### Learn from the best

Taught by experienced and highly knowledgeable senior instructors from emergency medicine, critical care and prehospital medicine.

### 07

#### Continued support

Consolidation of emailed multiple choice questions, based on Harvard-designed spaced education theory, and proven to be an effective method of guaranteeing knowledge retention.

### 02

#### Study when it suits you

Engaging, broadcast quality pre-learning videos (2.5 hours), shot in a professional studio, and edited in collaboration with a TV documentary director.

### 04

#### Cutting-edge educational techniques

One day face-to-face teaching based on the 2018 American Heart Association Scientific Statement on standards of resuscitation training, including mastery learning, deliberate practice, contextual learning, feedback and debriefing.

### 06

#### Practice makes perfect

Essential High-Quality CPR (HQ-CPR) training complemented by take-home practice mannequins.
